BRAND STORY

/ 品牌故事

01. During my time studying in the U.S, I went to the gym every day to swim. When I returned to China, I still kept this habit, but in summer, the swimming pool was full of people. People can only stand in the water, or move through the crowd like sardines. I think that as China's economic development gets better and better, people's requirements for the quality of life will become higher and higher, and the number of swimming pools in China will definitely increase exponentially. Because only in this way, people's demand for swimming and fitness exercise can be satisfied."

02. In the past, swimming pool tiles were a very small and unique variety, and the technology required for manufacturing was very high, so it has always been used as a very mysterious product in top engineering procurement products. The price has been increased one layer after another, so the final price will be very expensive. We make swimming pool tiles and mosaic tiles to allow these products to break through these barriers and make the originally expensive things affordable for all families.
